## Data Thieves & Hackers Can't Steal What They Don't Know Is There

Protect your valuable documents, files, tax information and more from identity thieves, employers, children and even hackers. It's a new concept in data theft prevention.

There has never been an easier way to keep private files *really* private.

### Features:

- Instantly hide an unlimited number of files, programs, folders and more
- Hide or show individual files or all files and folders at once
- Prevents hackers from accessing your files, even from the command prompt
- Folders are removed from Windows Explorer entirely.
- Files in folders cannot be accessed, even from shortcuts or recent document lists.
- Runs at Windows startup
- Runs in stealth mode and doesn't show up in the Applications tab when you press Control-Alt-Delete
- Hotkey for bringing the program out of Stealth Mode
- Hotkey for hiding all folders
- Hotkey for showing all folders
- Password protection when program is opened
- Password protection when program is brought out of stealth mode
- Password protection when hotkeys are used to hide or show all folders

### Houdini Users Enjoy:

#### Peace of Mind

Enjoy the peace of mind that comes with knowing your sensitive, valuable and sometimes even embarrassing data, files, photos and videos are far away from the prying eyes of employers, spouses, children, hackers and identity thieves.

#### A New Solution To An Old Problem

Hackers and identity thieves are targeting home computers more now than ever because medical records, banking information, tax returns and just about everything else that's important and valuable are stored there. Hackers and thieves know how to break into your computer without your knowledge but Houdini allows you to control what they see and access. A hacker can't access your taxes if he or she doesn't even know they are on your computer!

### **The Knowledge That Houdini Is Undetectable**

Houdini's hidden files are so well hidden that a hacker cannot even access them or see that they are on your computer even from the command prompt. Houdini itself provides you with the option of hiding the software as well.

### **Ease of Use**

Houdini's power does not lie in fancy buttons or in an impressive interface but rather in the ability for it to perform its job, to ensure that your hidden files stay hidden. Houdini's user interface is easy to use with one button to hide and one button to make your files visible again.

### **Optional Control With Password Protection And Instant Hotkey Access**

Houdini also gives you the option of assigning a hotkey for instant access to the application itself or to hide/show your files. You may also create a unique user password for added security.

### **Absolutely No Logging Of Houdini's Activity**

Houdini will not appear in your system logs, command logs, Windows logs or history files - nor is Houdini visible even by command or root access.

## **Corporate & Business Use**

Many small to large businesses face the growing concern over client and customer data and the ongoing struggle to protect it. Many businesses have already begun using Houdini to safeguard their client data including attorneys, doctors and accounting firms. Don't wait until your company or practice is hacked to use Houdini!

Volume licenses and discounts for Houdini are an affordable and wise investment. Houdini can save you tens of thousands of dollars in legal fees and prevent damage to your company's reputation due to the theft of client or customer records.

Purchase Oversight's Houdini for only \$24.95!

### **System Requirements:**

Houdini is compatible with Microsoft Windows 95/98/ME/NT/2000/XP/VISTA
